DESCRIPTION

**CAP RENDER** is a polymer modified mortar/plaster system, ready to use internally or externally, consisting of cement, hydrated lime, water repellent, silica sand and polymer additives, to provide a cohesive non-sag render giving a smooth finish with excellent adhesion. When mixed with water, a trowellable mortar result that is ideally suited for interior and exterior application.

COLOUR

Grey.

USES

For general masonry works with cement blocks, limestone etc.

ADVANTAGES

- Pre-packed, easy to use material, requiring only the simple addition of water.
- Precision made consistent results.
- High built non-sag.
- High bond strength to prepared surfaces.
- High resistance to freeze/thaw cycles.

APPLICATION INSTRUCTIONS

**Surface Preparation:**
The surface must be clean, free of dust deposits, loose mortar, chemical impurities, salts, form release oil and other contaminants which may affect the adhesion. All plaster bases should be sprayed thoroughly with clean water and all free water allowed to disappear before render is applied. Substrate must be primed with **CAP SUPERBOND**.

**Mixing:**
Mix 20 Kg bag of **CAPRENDER** with 4.5 to 4.7 liters of water to achieve a trowellable mix. Water requirements will depend on the weather conditions and humidity. It can be mixed by a mechanical mixer or by hand for approximately 3 minutes.

**Application:**
Apply a rush coat of 1 to 3 mm thick by hand or machine. It is not necessary to have an even coat of 1 to 3 mm thickness, as the first coat is the key coat. For second and final coating, the rush coat to be allowed to dry for at least 24 hours. Prior to second application, curing is necessary.

With the second application, built up thickness up to 2.5 cm and finish by felting or floating. Allow curing for minimum 3 days before applying any kind of paint, wall paper etc. Alternatively **CAP RENDER** can be applied without rush coat on primed substrates.

**Cleaning:**
**CAP RENDER** should be removed from tools, equipment and mixers with clean water immediately after use.

Note:
Optimum performance of **CAP RENDER** will not be attained in cases like failure to prime the substrate.

**COVERAGE**

20kg of **CAPRENDER** will yield approximately 13.2 liter and will cover 0.013m³ volume. Or the coverage in m² will be 0.5m² at 20 mm thickness.

**PACKAGING**

**CAPRENDER** is supplied in 20kg bags.

**STORAGE**

**CAPRENDER** should be stored over pallets in a cool dry place. Shelf life will be 12 months in unopened bags.

**SAFETY PRECAUTIONS**

**CAP RENDER** does not contain toxic materials. Care should be taken to avoid inhalation of dust and to prevent material entering into eyes.
TECHNICAL SERVICE:

Our Technical Service Department is available at any time to advise you in the correct use of this product or any other Ahlia products.

Note: The information presented herein is based on the best of our knowledge and expertise for which every effort is made to ensure its reliability. Although all the products are subjected to rigid quality tests and are guaranteed against defective materials and manufacture, no specific guarantee can be extended because results depend not only on quality but also on other factors beyond our control.

As all Ahlia Technical Data Sheets are updated on a regular basis, it is the user responsibility to collect most recent issue.
